LITEFIGHTER
the solution you need

LiteFighter Shelter Systems give small units increased mobility plus the protection, comfort and privacy required for the future battlefield.

MOBILITY

Ruck-able, lightweight, yet durable LiteFighter Shelters allow small units to operate autonomously across multiple environments and mitigates the need for operating out of well-equipped bases.

PROTECTION / COMFORT / PRIVACY

Permethrin treated LiteFighter Shelters provide a basic level of protection, comfort and privacy to soldiers so they are not seriously miserable every single minute of every day.

SOURCE - HTTP://WWW.HEALTHMAP.ORG
DESCRIPTION
The active ingredient in BullsEye™ Bug Repellent is IR3535®. BullsEye™ repels mosquitoes that may transmit Zika, Chikungunya, Dengue Fever and West Nile Virus for up to 8 hours. It offers proven, strong protection when you need it most. Sold by the case. Each case contains twelve 4 ounce bottles.

WHY BULLSEYE™ IS BETTER THAN DEET
Mosquitoes have receptors that detect your body’s release of carbon dioxide. Most bug repellents use a strong smelling compound that disorients these receptors. This solution can work okay, but the problem with this approach is that it still requires mosquitoes to get close enough to smell your bare skin.

Some repellents, like DEET, use a greasy formula that acts as a dangerous neurotoxin to both the wearer and the insect. It’s goopy, so it rubs off on the mosquitoes that land on you. The problem with this solution is that it still requires that annoying mosquitoes get close enough to touch your skin.

BullsEye™ Bug Repellent with IR3535® takes a different approach. Its unique formula is non-greasy, non-toxic and odorless. It masks your body’s release of carbon dioxide. Now, biting bugs don’t need to get close enough to smell you. Think of BullsEye™ Bug Repellent as an invisible shield that hides you from hungry mosquitoes when you need it most.
